

MEASURING YOUR TEST ENVIRONMENT MANAGEMENT

PROBLEM STATEMENT

Weak management of your Non Production IT environments is costing companies millions per annum due to Infrastructure & License over spend, project delays and low Development & Test productivity.

Typical Issues include:

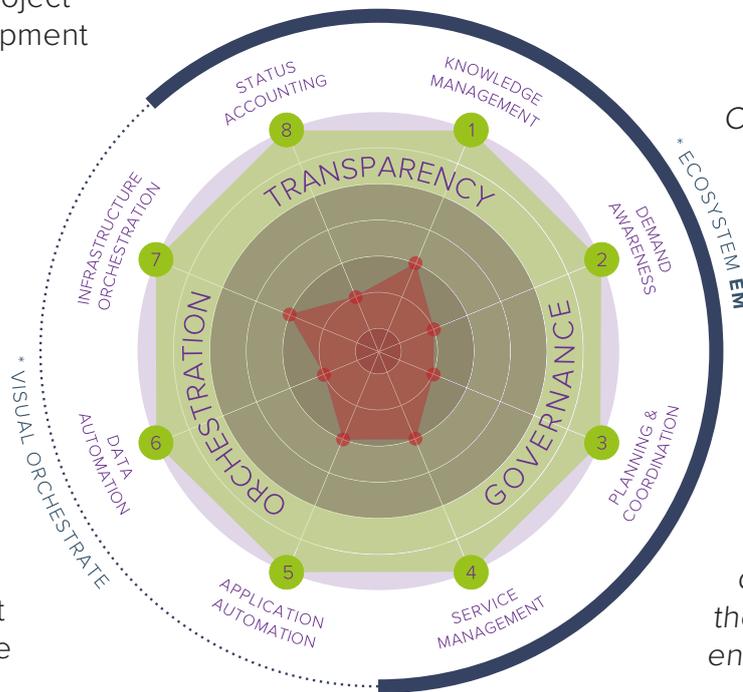

- Test Environment Resilience Issues (Outages & Instability)
- Test Environment Over Proliferation (& non decommissioning)
- IT Environments not being fit for purpose

When it comes to understanding and improving one test environment management, the best source of reference is undoubtedly the TEMMI (Test Environment Management Maturity Index).

A simple, but effective model that allows organisations to rate themselves against eight unique but complimentary dimensions.

THE 8 DIMENSIONS OF TEMMI

- | | |
|----------------------------|----------------------------------|
| 1. Knowledge Management | 5. Application Automation |
| 2. Demand Analysis | 6. Test Data Automation |
| 3. Planning & Coordination | 7. Infrastructure Orchestration |
| 4. IT Service Management | 8. Status Accounting & Reporting |

Consider each of the above points from the perspective of People, Process & Technology.

If you, like most organisations, are scoring low in most the dimensions then visit us at enov8.com

INNOVATE WITH ENOV8

Enov8's EcoSystem EM (IT & Test Environment Management) solution is an "out of the box" TEM solution that allows you to successfully manage your test environments by ensuring that all 8 dimensions of the TEMMI are maximised. Enov8 Ecosystem achieves this though providing a platform that uplifts enterprise transparency, governance, measurement, operational standardisation & Automation.
